TATTOO AFTERCARE

Proper aftercare helps your tattoo heal cleanly and maintain its appearance. Healing typically takes 2–4 weeks.

Second-Skin Bandage

- Leave the bandage on for the time recommended by your artist, following the product's instructions.
- Fluid buildup beneath the bandage is normal.
- Remove if it leaks, peels enough to expose the tattoo, or causes irritation.
- **Blistering, burning, or an adhesive reaction requires immediate removal.**
- Remove gently under warm running water.

Cleaning

- Always wash your hands before touching your tattoo.
- Wash twice daily with mild, fragrance-free soap and lukewarm water.
- Pat dry with a clean paper towel. Do not scrub.

Moisturizing

- Apply a thin layer of lightweight, fragrance-free lotion that absorbs readily.
- **Avoid thick, greasy ointments that sit on the skin.** They can collect dirt, dust, lint, and other contaminants against the healing tattoo.
- Your tattoo should feel moisturized, never greasy or sticky.

Avoid Until Healed

- Swimming, soaking, hot tubs, and baths.
- Scratching, picking, or peeling.
- Direct sunlight and tanning.
- Tight clothing, friction, and excessive sweating.

Healing & Warning Signs

- Mild redness, itching, peeling, and flaking are normal.
- **Spreading redness, worsening pain, excessive swelling, pus, or fever may indicate infection. Seek medical attention.**

Keep it clean, lightly moisturized, and leave it alone.
